## Contents:

1. Finding Common Ground in the Archaeology and Biology of the Americas’ Past  
   *Benjamin M. Auerbach*

2. Ancient and Modern Genetic Variation in the Americas  
   *Brian M. Kemp and Theodore G. Schurr*

3. Peopling the Americas via Multiple Migrations from Beringia: Evidence from the Early Holocene of the Columbia Plateau  
   *James C. Chatters*

4. Human Skeletal Variation and Environmental Diversity in Northwestern North America  
   *Jerome S. Cybulski*

5. Discrete Dental Trait Evidence of Migration Patterns in the Northern Southwest  
   *Kathy R. Durand, Meradeth Snow, David Glenn Smith, and Stephen R. Durand*

6. The Introduction of Agriculture and the Foundation of Biological Variation in the Southern Southwest  
   *James T. Watson*

   *Benjamin M. Auerbach*

8. Skeletal Evidence of Cultural Variation: Mutilation Related to Warfare  
   *Christopher W. Schmidt, Rachel Lockhart Sharkey, Christopher Newman, Anna Serrano, Melissa Zolnierz, Jeffrey A. Plunkett, and Anne Bader*

9. Population History of the Moquegua Valley, Far South Coast of Peru  
   *Ken-ichi Shinoda, Sonia Guillen, and Izumi Shimada*

10. Climate Variation, Biological Adaptation, and Postcranial Metric Variation in Precontact North America  
    *Kathryn A. King*

11. Body Proportions in Recent Native Americans: Colonization History Versus Ecogeographical Patterns  
    *Richard L. Jantz, Paul Marr, and Claire A. Jantz*

12. Human Settlement in the New World: Multidisciplinary Approaches, the "Beringian" Standstill, and the Shape of Things to Come  
    *David G. Anderson*
13. Bridging the Empirical Divide of Human Variation Research in the New World
   Kenneth E. Sassaman
